Annex

Trade the outcome of anything.

Permissionless binary prediction markets on Mezo. Open a Trove in-app to mint MUSD, trade BTC PriceFeed or event markets via an on-chain AMM, and redeem winning shares 1:1 for MUSD.

MEZO TESTNET · 31611 | IN-APP TROVES + PRICEFEED | 0.30% ISOLATED FEE | NON-CUSTODIAL

Annex

THE PROBLEM

People already trade on outcomes. The venues do not fit.

Offshore and custodial

Funds sit with an operator, not in a contract you can verify.

Disjointed stablecoin UX

Plain ERC-20 apps force Bitcoin users off-app to bridge or open a CDP Trove elsewhere before trading.

Opaque risk

A proprietary order book and private risk engine hide whether the market is truly solvent.

Manual BTC reliance

Objective BTC/USD strike markets should settle from canonical on-chain feeds, not human resolvers.

Annex

THE SOLUTION · WAVE 2 L3+ INTEGRATION

A prediction market protocol wired into Mezo's core stack.

- **In-app Trove funding:** open or top up a Mezo Trove via **BorrowerOperations** with live ICR and liquidation price from **TroveManager**.
- **Dual-path markets:** BTC/USD strikes settle permissionlessly via **Mezo PriceFeed**; custom events stay **Manual**.
- **Transparent 0.30% entry fee:** isolated protocol revenue with **1:1 MUSD settlement** and **0% exit tax**.
- **Zero operator risk:** immutable contract, non-custodial pools, and **no off-chain pricing**.

INTEGRATION	ENTRY FEE	CONTRACT	TESTS
L3+	0.30%	1	65

Annex

AMM & FEE ECONOMICS

Honest pricing, clean revenue.

```
buyShares YES with gross MUSD
  ├─ 0.30% fee (30 bps) ──► accruedFees (owner claim)
  └─ net splits into complete set: net YES + net NO
       ├─ NO half becomes counter-collateral
       └─ pool releases YES (k preserved)

buyer receives  net + swapOut YES · winner redeems 1:1
```

- **Exact collateralization** — every net MUSD mints 1 YES + 1 NO.
- **Entry fee, 0% exit fee** — winning shares always redeem at 1.00 MUSD par.
- **LP spreads preserved** — creator LPs earn pool trade spreads at settlement.

PRE-TRADE DISCLOSURE (100 MUSD BUY)

0.30 MUSD fee · 99.70 net

Itemized fee, swap shares, avg price & 1:1 win payout before signing.

Annex

SOLVENCY & YIELD SAFETY

The invariant is the product.

```
MUSD.balanceOf(this) == totalLockedCollateral + accruedFees  |  locked == totalYes == totalNo
```

Strict Fee Isolation

`claimFees()` withdraws `accruedFees` only — locked market collateral can never be touched.

Oracle & Yield Guards

Manual resolves revert on PriceFeed markets. Idle StabilityPool yield is deferred so withdrawals never lock.

65 Foundry Tests

51 Wave 1 regression + invariant tests plus 14 Wave 2 PriceFeed, fee isolation, Trove & fuzz tests.

Idle-pool yield was evaluated and deliberately deferred until atomic sMUSD liquidity ensures 1:1 redemption liveness.

Annex

THE WAVE 2 DEMO — 120 SECONDS

Mint. Create. Trade. Redeem.

01

Connect

Bitcoin wallet (Xverse, Unisat, OKX) or injected EVM wallet via Mezo Passport.

02

Mint MUSD In-App

Open or top up a Trove on `/trove` via BorrowerOperations with live ICR & liq price.

03

Trade with Fee Quote

Pick a BTC PriceFeed or Manual market, inspect 0.30% fee & shares, and swap MUSD.

04

Settle & Redeem 1:1

Call permissionless `resolvePriceMarket`, redeem 1:1 MUSD, claim LP & isolated fees.

From raw BTC to prediction trade and 1:1 settlement — zero external dApp hops.

WHAT IS BUILT IN WAVE 2

Built for Mezo Testnet.

PIECE	STATUS
In-app Trove funding (`BorrowerOperations` + `TroveManager` + hints)	done — /trove + drawers
Dual resolution (`PriceFeed` BTC markets vs `Manual` events)	done — audited & guarded
`0.30%` entry protocol fee + `claimFees` collateral isolation	done — 65 tests green
Frontend (React 18 / Passport / Curve), scripts, deck & docs	done — fork E2E verified

WAVE 1 LEGACY

WAVE 2 STATUS

Deploy Ready

TESTS

65 / 65

CHAIN

31611

Annex

ROADMAP

Bitcoin-native markets for every measurable claim.

WAVE 2 SHIPPED

L3+ Integration

In-app Mezo Troves, BTC PriceFeed settlement, 0.30% isolated fee & deferred yield proof.

WAVE 2 LAUNCH

Live Rollout

Deploy & Blockscout-verify Wave 2 contract, redeploy frontend, external user testing & demo cut.

BEYOND

Mainnet Scale

Atomic sMUSD yield routing, transferable ERC-20 LP positions & per-market activity charts.
